

Syllabus: Course M17 CLNV 530 01, Fall 2017

Introduction to Biomedical Informatics: Foundations

Mondays 4 – 7 pm

Course Masters

Preferred method of contact: email

Office Hours: By appointment

Philip R.O. Payne, PhD, FACMI
314-454-5272
prpayne@wustl.edu

Albert M. Lai
314-273-1391
amlai@wustl.edu

Guest Lecturers:

Tiffani Bright, PhD

tjbright@wustl.edu

Randi Foraker, MA, PhD

Randi.foraker@wustl.edu

Tara Payne, MA

Tara.payne@wustl.edu

Josh Swamidass, MD, PhD swamidass@wustl.edu

Po-Yin Yen, RN, PhD yenp@wustl.edu

Keith Woeltje, MD, PhD Keith.woeltje@bjc.org

Technical Support

Andrea Krussel

Academic Program Administrator
krussela@wustl.edu/314-273-1676

Philip R.O. Payne, PhD, FACMI

Director, Institute for Informatics
Robert J. Terry Professor
Professor of Computer Science and Engineering

Dr. Payne is the founding director of the Institute for Informatics (I²) at Washington University in St. Louis, where he also serves as the Robert J. Terry Professor and Professor of Computer Science and Engineering. Previously, Dr. Payne was Professor and Chair of the Department of Biomedical Informatics at The Ohio State University.

Background:

Dr. Payne is an internationally recognized leader in the field of clinical research informatics (CRI) and translational bioinformatics (TBI). His research portfolio is actively supported by a combination of NCATS, NLM, and NCI grants and contracts, as well as a variety of awards from both nonprofit and philanthropic organizations.

Dr. Payne received his Ph.D. with distinction in Biomedical Informatics from Columbia University, where his research focused on the use of knowledge engineering and human-computer interaction design principles in order to improve the efficiency of multi-site clinical and translational research programs. Prior to pursuing his graduate training, Dr. Payne served in a number of technical and leadership roles at both the UCSD Shiley Eye Center and UCSD Moores Cancer Center.

Dr. Payne's leadership in the clinical research informatics community has been recognized through his appointment to numerous national steering, scientific, editorial and advisory committees, including efforts associated with the American Medical Informatics Association (AMIA), AcademyHealth, the Association for Computing Machinery (ACM), the National Cancer Institute (NCI), the National Library of Medicine (NLM) and the

CTSA consortium, as well as his engagement as a consultant to academic health centers throughout the United States and the Institute of Medicine.

Research Interests:

- Knowledge-based approaches to the discovery and analysis of bio-molecular and clinical phenotypes and the ensuing identification of precision diagnostic and therapeutic strategies in cancer
- Interventional approaches to the use of electronic health records in order to address modifiable risk factors for disease and enable patient-centered decision making
- The study of human factors and workflow issues surrounding the optimal use of healthcare information technology

Albert M. Lai, PhD

Chief Research Information Officer

Associate Professor, Department of Medicine, Division of General Medical Sciences

Dr. Lai is focused on applying computer science and informatics techniques to solve problems in the clinical domain.

Background:

Albert M. Lai, PhD, is the Chief Research Information Officer for the Institute for Informatics and an Associate Professor of General Medical Sciences at Washington University School of Medicine in St. Louis. Dr. Lai specializes in the development of research informatics infrastructure and is well recognized in the fields of clinical research informatics and consumer health informatics. His recent research has focused on the application of natural language processing, temporal reasoning and information fusion to generate a longitudinal computable phenotype to support clinical trial prescreening. His research portfolio has been supported by a combination of NCATS, NLM, NCI, AHRQ and PCORI grants and contracts. Previously, Dr. Lai served as the Associate Chief Research Information Officer at The Ohio State University Wexner Medical Center.

Dr. Lai received his PhD with distinction in biomedical informatics from Columbia University, where his research focused on designing and evaluating the effectiveness of training older adults to use a home telemedicine system at a distance. Dr. Lai also received his undergraduate and graduate degrees in computer science from Columbia University. While working on his Master's degree, he conducted research on performance analysis of thin-client computing over wide area networks.

Dr. Lai's leadership in the clinical research and consumer health informatics communities has been recognized through his election to working group leadership positions within the American Medical Informatics Association as well as his participation in federal study sections and advisory committees.

Research Interests:

- Clinical research informatics
- Clinical informatics
- Consumer health informatics
- Telemedicine
- Usability
- Natural language processing
- Mobile health

About This Course

Required Texts:

Journal publications and/or equivalent readings will be posted in blackboard at least 1-week prior to the lectures that they are relevant to.

Course Description: This survey course provides an overview of the theories and methods that comprise the field of biomedical informatics. Topics to be covered include:

- Information architecture as applied to the broad biomedical computing domain
- Data codification and interoperability standards
- Biological, clinical, and population health relevant data analytic methods
- The design of healthcare information systems
- Human factors and cognitive science as they relate to the use of information technology in the health and life science
- Evaluation methods that can be applied to biomedical computing applications
- Ethical, legal, and social implications of information technology solutions as applied to the health and life sciences.

The course will consist of both didactic lectures as well as experiential learning opportunities including “hands on” laboratory sessions and journal club style discussion. The course will culminate with a capstone project requiring the in-depth examination, critique and presentation of a student-selected topic related to the broad field of biomedical informatics.

Biomedical Informatics I is designed primarily for individuals with a background in the health and/or life sciences and who have completed a course in introductory statistics (e.g., MATH 1011). No assumptions are made about computer science or clinical background; however, some experience with computers and a high-level familiarity with the health and life sciences will be useful. This course does not require any programming knowledge, and it will not teach students how to program.

Goals of the Course: The goal of this course is to introduce trainees to the basic definitions, theories, and methods that serve as the foundations for the scientific field of Biomedical Informatics.

Upon completion of this course, students will be familiar with core concepts relevant to the major sub-domains of Biomedical Informatics (Bioinformatics, Translational Bioinformatics, Imaging Informatics, Clinical Informatics, Clinical Research Informatics, and Public or Population Health Informatics). Additionally, students will have:

- An appreciation for different scales of biological, clinical, and population-level data, in particular their origin, derivation and utility;
- An understanding of the contributing theoretical frameworks that underlie modern approaches to the analysis and understanding of such data types; and
- Critical evaluation skills that allow for the evaluation of informatics interventions informed by items (1) & (2) and intended to address real-world clinical problems.

Daily Work/Homework:

Each week, students will be expected to have read the assigned readings posted on Blackboard and turn in a weekly 1-2 page lecture summary that responds to discussion prompts provided by the instructors.

Major Assignment Descriptions:

The course will culminate with a written capstone project and presentation as well as a final exam. This project will include:

- The selection of a relevant topic area in the field of Biomedical Informatics that represents an opportunity for further research and investigation, to be summarized in a 1-page topic proposal submitted to the instructors by 10/23 for discussion and approval;
- The preparation and submission of a 4000-word review paper (1" margins, 12pt font, double spaced, with Vancouver-style references) that summarizes both relevant theories, methods and prior work pertaining to the selected topic, as well as open research questions, to be submitted by 12/11
- The preparation and delivery of the above content in a 15m in-class scientific-style presentation (using PowerPoint slides or equivalent visual materials), accompanied by a 5-10m question and answer period involving class participants.

Technology Requirements:

All the class materials, as well as the assignments and communications will be done through Blackboard (found at <https://bb.wustl.edu>).

Students will be expected to bring a laptop to class for the experiential learning components of the course. Problems with your computer or other technology issues are not an excuse for delays in meeting expectations and missed deadlines for the course. If you have a problem, get help in solving it immediately. At a minimum, you will need the following software/hardware to participate in this course:

1. A laptop computer with a current operating system (e.g. Windows, Mac OS, Linux)
 - a. *You will need appropriate privileges on this computer to be able to install additional, open-source software packages as assigned by the instructors throughout the class*
2. An up-to-date internet browser (preferably Google's Chrome or Apple's Safari)
3. An active WUSTL key (such that you can log-into the wireless network and/or other university computing resources)
4. The ability to access and use the Blackboard Learning Management System (<https://bb.wustl.edu>)
5. Access to a high-speed internet connection

In addition, all students will be expected to obtain a username and password for the National Library of Medicine's (NLM) terminology services. This requires the completion of an account request and user license at the following web-site: <https://uts.nlm.nih.gov/home.html>

Time Requirements

For face-to-face courses in the CRTC program, it is expected that you will be in class 1 hour per week for each credit of the course a week plus travel time (i.e. this is a 3 credit course so that is 3 hours a week). In addition, it is assumed you will be doing homework and reading assignments that take at least double that time. You should anticipate your time commitment for this course to be at least 9 hours a week.

Course Schedule (subject to modification)

Dates	Topic	Instructor(s)
8-28	Introduction to Biomedical informatics as a scientific discipline	Albert Lai, Po-Yin Yen, Tiffani Bright, Tara Payne, Randi Foraker
9-4	NO IN PERSON SESSION , Ethical, Legal, and Social Implications of Biomedical Informatics (self-directed on-line learning module)	
9-11	Bioinformatics	Josh Swamidass
9-18	Imaging Informatics	Albert Lai
9-25	Clinical and Health Informatics	Po-Yin Yen, Tiffani Bright
10-2	Translational Bioinformatics and Clinical Research Informatics	Philip Payne
10-9	Population & Public Health Informatics	Randi Foraker
10-16	Cognitive Science and Medical Decision-Making	Albert Lai
10-23	NO CLASS	
10-30	Human Computer Interaction, Work Flow Analysis, and Data Visualization	Po-Yin Yen,
11-6	Knowledge Engineering, Data Models, and Codification Standards (Tara Payne
11-13	Information Retrieval and Natural Language Processing (NLP)	Albert Lai
11-20	Healthcare Systems Architecture and Clinical Decision Support Systems	Keith Woeltje, Albert Lai
11-27	Artificial Intelligence and Machine Learning in Biomedical Computing	Josh Swamidass
12-4	Course Review and Wrap Up	
12-11	Final Projects Due and In-Person Presentations	
12-18	Final Exam	

Assessment/Grading

Grade Composition:

Summary of Course Assignment Point Values:

Weekly Lecture Write-ups (grades as Pass/Fail))	15%
One page topic proposal	
Final Project (25% paper/15% presentation)	40%
Final Exam	30%
Attendance, Participation, and Professionalism	<u>15%</u>
	100

Grading Scale:

Grades/sub-grades	Course Points	4-point scale
A+ (98% to 100%)	98-100	4.00
A (93% to 97%)	93-97	4.00
A- (90% to 92%)	90-92	3.7
B+ (88% to 89%)	87-89	3.3
B (83% to 87%) – minimum for Core courses	83-86	3.00
B- (80% to 82%)	80-82	2.7
C+ (77% to 79%)	77-79	2.3
C (73% to 77%) – minimum for Electives	73-76	2.00
C- (70% to 72%)	70-72	1.7

Penalties for Late Work:

Late work will not be accepted, unless in the event of unforeseen circumstances. If these situations arise, students must receive written approval from the coursemaster. If you must miss a class, please email a copy of the weekly assignment to Andrea Krussel prior to the start of the class when it is due.

Attendance Requirement:

In-class participation is an important part of the coursework taken as part of the MSCI or AHBR programs and the clinical research training programs within the CRTC. Students are expected to **physically attend at least 75% of class sessions** for each course they take. Watching the videotaped class presentations, if available, is helpful to keep up with missed sessions, but is not a substitute for class attendance. Students whose professional duties or personal circumstances prevent them from meeting this program attendance requirement must receive prior written approval of the coursemaster, and agree on an alternate plan to achieve course objectives and earn academic credit.

Blackboard Support

If you have any technical problems accessing [Blackboard](#) please e-mail crtc@email.wustl.edu. Note, this mailbox is not monitored in the evening or on weekends. If you need immediate help after hours please put a service request into <https://wusm.service-now.com>.

Course Policies

Participation:

- It is vitally important that our classroom environment promote the respectful exchange of ideas. This entails being sensitive to the views and beliefs expressed during discussions whether in class or online.
- Your success in this course will heavily depend on your ability to communicate, engage and participate in all course activities. Successful completion of this course requires that a student keep up with all assignments and prep work for the lab components.

If you are unable to participate in the scheduled class activity or discussions you must notify the coursemaster within the week of that class module or discussion. **An unexcused failure to engage or participate with the class will be counted as an absence; unexcused absences may result in failure.** The coursemaster reserves the right to make judgment to accept and/or make-up assignments missed because of failed participation in the course activities.

Drop Dates:

If the occasion should arise that you want or need to drop this class, please see me first. You can drop for any reason during the course of the semester, however you may only receive a partial or no tuition reimbursement depending upon how far into the semester you drop the course. See the [Academic Calendar](#) for your program for specific dates and reimbursement policies. Note, late withdrawals will also appear on your transcript as a withdrawal.

CRTC Academic Policy Guidelines:

Guidelines regarding CRTC course registration and enrollment, grades, tuition obligation, and academic leave are consolidated in the [CRTC Academic Policy Guidelines](#). Please take a moment to review this document.

CRTC Guidelines for Academic and Non-Academic Transgressions:

By registering for this course you have agreed to the terms of the [CRTC Guidelines for Academic and Non-Academic Transgressions](#). If you have not already reviewed this policy, please be sure to before beginning any CRTC related coursework.

Academic Integrity/Plagiarism:

- Academic dishonesty is a serious offense that may lead to probation, suspension, or dismissal from the University. One form of academic dishonesty is plagiarism – the use of an author's ideas, statements, or approaches without crediting the source. Academic dishonesty also includes such acts as cheating by copying information from another student. **Plagiarism and cheating are not acceptable.**
- Academic dishonesty will be reported to the Office of the Registrar for possible action. The coursemaster will make an academic judgment about the student's grade on that work and in that course. The CRTC process regarding academic dishonesty is described in the [CRTC Guidelines for Academic and Non-Academic Transgressions](#)

Writing Assistance:

For additional help on your writing, consult the expert staff of [The Writing Center](#) in Olin Library (first floor). It can be enormously helpful to ask someone outside a course to read your essays and to provide feedback on strength of argument, clarity, organization, etc.

Mental Health Resources:

Mental Health Services' professional staff members work with students to resolve personal and interpersonal difficulties, many of which can affect the academic experience. These include conflicts with or worry about friends or family, concerns about eating or drinking patterns, and feelings of anxiety and depression. See: <http://shs.wustl.edu/MentalHealth>.

Reporting Policies:

Please also [review the CRTC website for policies](#) regarding sexual assault reporting and reporting concerns about bias, prejudice or discrimination.
